Landform

Altiplano

Description

This high plateau sits in the central Andes, at 11,000 feet (3,353 meters) above sea level. This area was once covered by a vast inland lake. It is now covered with a dense grassland that holds the fragile soil together with deep roots. The grass turns the bright, high-altitude sunshine into energy. Animals, such as llamas and alpacas, which produce highly valued meat and wool, eat this grass.
